

## **DESCRIPTION**

The A4716 is a Dual Wide-Bandwidth, fast single-pole double-throw (SPDT) CMOS switch featuring an On-Resistance of 0.3 ohm at  $V_{DD}=5V$  and wide power supply range from 1.65V to 5.5V. It can be used as an analog switch or as a low-delay bus switch.

Break-before-make function for both parts eliminates signal disruption during switching from preventing both switches being enabled simultaneously.

The A4716 is available in MSOP10 package
